CTMI Media Release – April 2023

ChamberTrust Management International Inc. (CTMI) is pleased to announce that it has entered into additional private- and public-sector research partnerships for its AI authorship protection systems referred to as C-eV.

The C-eV systems are based on the proven long-term ChamberTrust-eVault online service that has been protecting intellectual property – including source-code, contracts, trade documentation, requests for proposals, and more - for over a decade.

The updated C-eV online service offers strong **authorship protection** in the age of AI – a key element in our times where generative AI training and analysis based on large-scale models that harvest a multitude of digital source data (including private and semi-private sources), often without the knowledge or approval of the authors. This applies to the arts as well as the sciences.
